What's new in CoachIt

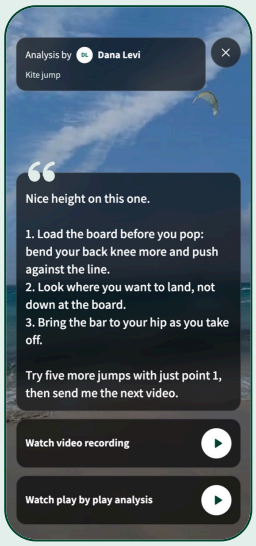

Six updates were merged today and are live on the site. They work the same for trainees, coaches and admins. There are no database changes, so nothing needs to be run in Supabase.

Live now | PRs #10 – #15 | Trainee · Coach · Admin | No Supabase steps

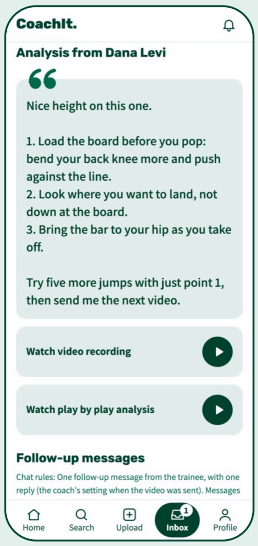

PR #14 · ANALYSIS

The analysis looks the same everywhere

- **Swipe right on a video in the full-screen feed:** the analysis now floats over the paused video instead of opening a white screen.
- At the top: "Analysis by" with the coach's photo and name, as in the feed. A round X goes back.
- The coach's text sits in a quote box with round "66" marks on its top edge. Recordings and the play-by-play open from boxes with a play button.
- The request page and the video page use the same boxes.

Request page

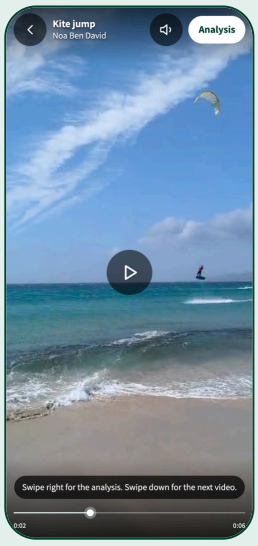

PR #12 · VIDEO

No more black bars

- **Feed:** every video fills the full width. Very tall clips are cropped to 4:5 at most, like Instagram.
- **Full screen** (feed player and play-by-play): the video fills the screen when its shape is close to the phone's. A very different shape, such as a wide clip on a phone, is still shown whole.
- The coach's drawings still land in the right place on a filled video.

Feed

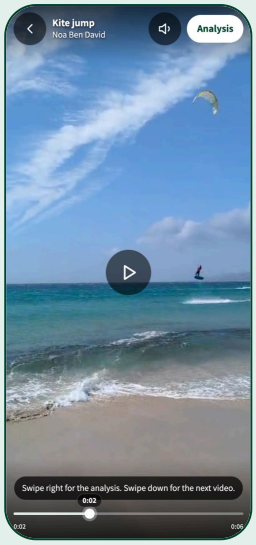

Full-screen player

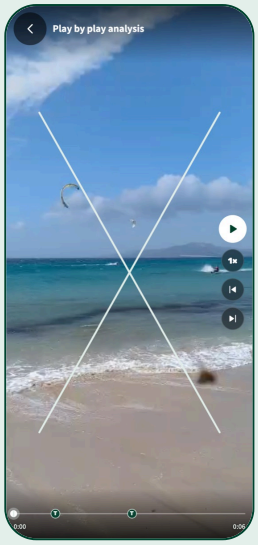

PR #13 · PLAYERS

New timeline and controls

- **Timeline:** a thin mint line with a white scrub circle. A time bubble shows while you drag.
- **Frame marks:** a short line means a drawing, a dark circle with a T means a note, and a mint circle with a T means both.
- **Play by play:** the six text buttons became a small rail on the right: play, speed (1× → ½× → ¼×), and a 0.1-second step back or forward.

Dragging the timeline

Play by play

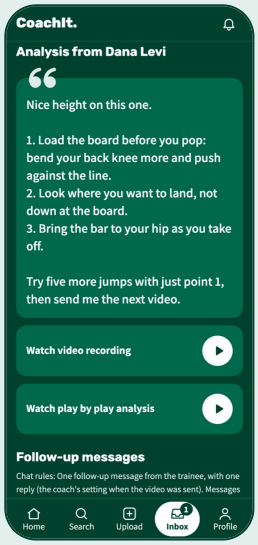

PR #15 · SETTINGS

Dark mode (proposal)

- **Settings → Appearance:** Light or Dark. Light is the default and looks exactly as before.
- Dark mode uses only the brand colours: a deep-green screen and bottle-green cards, with no black.
- The choice is saved on the device only. The privacy page mentions this.
- This is still a proposal. The brand book will need a dark section if we keep it.

Feed, dark

Request page, dark

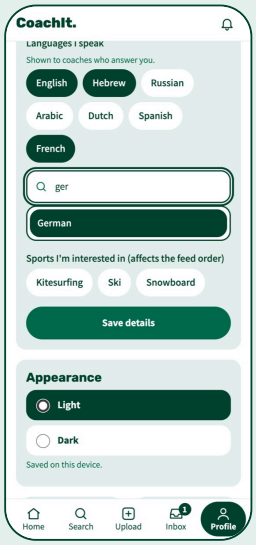

PR #11 · LANGUAGES

Easier language picker

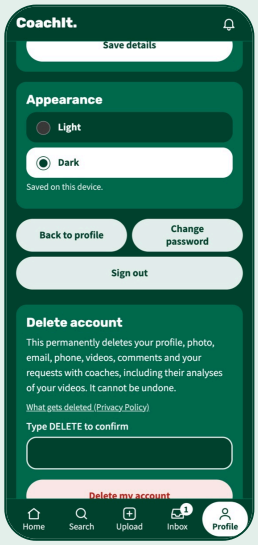

- The six common languages stay as pills: English, Hebrew, Russian, Arabic, Dutch and Spanish.
- Every other language is in a search box. A language picked there appears as a ticked pill.
- It appears in sign-up, the Google first-time setup and Settings. Saved languages didn't change.

PR #10 · SPACING

There is now a gap between text and the row of buttons under it, so buttons no longer stick to the text above them.

Settings → Languages

Settings → Appearance

Worth knowing

One exception: the coach's drawing screen keeps the whole frame visible, with bars when needed, so nothing is cut off at the edges while drawing. Its own button rail is getting the same compact look in a separate PR.

To try it: open the site on your phone, tap a video in the feed, swipe right, then tap "Watch play by play analysis". Dark mode is in Settings → Appearance.

Screenshots were taken on an iPhone-size screen from a test setup with sample data (not real users).
